TASKS IN PYTHON

1. Write a program to print "Welcome to CJC" on a single line but there should be 3 print statements including the 3 words.

2. Program to enter a number from user and check whether it is odd or even number using simple if, if – else and elif.
   e.g 12 – Even, 3 – Odd, 0 – Zero

3. Program to enter a number from user and print its table.

4. Program to print 5 to 50 skipping 25 with increment of 5.

5. Program to enter no. of month and print the total no. of days in that month using elif.

6. Find the output of following program:
   ```
   x = "global"
   def m1():
           global x
           y = "local"
           x = x * 2
           print(x)
           print(y)
   m1()
   ```

7. Program to calculate area of circle and circumference of circle by defining functions.

8. Design a template Student with fields rollno, name, address in one module Student.py and display choice as insert data, display data and exit in other module Test.py.
